

The following comment was submitted by Kansas City Power & Light Company on February 6, 2007.

Comment from Kansas City Power & Light Company on proposed amendment to 10 CSR 10-6.260 Restriction of Emission of Sulfur Compounds.

In order to clarify the requirements of the Hawthorn SO₂ limit, we would suggest that the footnote to Table 1 read, "The SO₂ emission rate comes from the PSD permit for Unit 5A and is implemented in accordance with the terms of the permit."

This proposed language has been reviewed by MDNR and EPA Region VII and has been found acceptable to all concerned.

KCP&L appreciates this opportunity to comment.
